

InGold PAY® introduces new feature: gold payment round-ups streamline processes for staff and businesses

14 April 2025, Prague – IBIS InGold, building on its reputation as an innovator in precious metals investment, has announced another enhancement to InGold PAY®, its app designed to meet the specific needs of employees at businesses accepting payments in gold.

InGold PAY® is purpose-built to accept payments in gold. When customers choose to pay in gold, employees use the app to submit a payment request for the products or services being sold. The app also offers a round-up of all payments received in gold.

The latest update introduces the option of generating a statement of gold payments, significantly streamlining daily tasks such as till closures and payment checks. The statement, exported as a PDF, can be used in the same way as the cash receipt and card transaction summaries that cashiers handle. It can also be easily shared with supervisors, the corporate gold account manager, or the accounting department, simplifying accounting processes and guaranteeing the transparency of all transactions. Besides enabling businesses to accept gold payments at all establishments and branches, this tool also improves the management and tracking of these payments.

Users can select the time period for which they wish to generate the statement. This may be a specific shift, a day, or any another interval of their choice. For businesses that prefer physical documents, the PDF format is easy to print, which makes administrative tasks even simpler.

“With this new feature in the InGold PAY® app, we’re making it easier for businesses and their employees to keep track of gold payments. Our goal is to provide modern, user-friendly tools that make employees’ everyday tasks simpler, while also improving overall business efficiency,” says Petr Špičák, IBIS InGold’s marketing director.

IBIS InGold continues to solidify its position as a leader in modern precious metals investment and gold payments. The addition of a feature that generates statements of gold payments received at individual branches not only makes the app all the more user-friendly, but also shows how the company responds to its customers’ needs and adapts its products to meet evolving market demands. This innovation is another step towards safeguarding a smooth, secure, and transparent process for the acceptance of gold payments.
